Apple Internet Router 3.0: GeoPort Compatibility (12/93)

When I use Apple Internet Router (AIR) 3.0 on my Quadra 840AV, the router runs
properly. If Express Modem for Geoport is loaded, the 840AV crashes at bootup.

Are the Apple Internet Router 3.0 and the GeoPort software compatibile?

This article has been archived and is no longer updated by Apple.
The Centris/Quadra AV computers require Apple Internet Router 3.0.1 when the
Express Modem for GeoPort software is installed. AIR 3.0 will either crash at
boot (if the router auto-starts at boot) or will crash with a "Type 3" error
(if the router is manually started), when the GeoPort software has been
installed on the system also.
